Art Unit: 1742

1. The Examiner has carefully considered Applicant's Response of 11/20/03. In light of new art, the Examiner makes a new rejection which is accordingly not made final.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-31, 34-58 and 63-71 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 00/37878 (WO'878) in view of West et al. WO'878 discloses the invention substantially as claimed. WO'878 discloses a frangible projectile comprising:

WO'878 discloses a projectile comprising:

a W component;

a Sn component; and

a polymer binder.

WO'878 discloses wherein the polymer binder comprises 0.10% of the projectile (page 6, lines 6-9), W component comprises 50% or less (page 6, lines 1-2) and the remainder being Sn (page 6, lines 4-7), overlapping the ranges as claimed by Applicant.

WO'878 further discloses wherein the projectile has a density of 13-14 g/cm

Art Unit: 1742

However, WO'878 do not disclose wherein the projectile is part of an ammunition and the ammunition components.

West et al. disclose wherein a projectile is part of a ammunition comprising known cartridge components comprising firing pin, case, primer, and propellant (col. 3, lines 24-33) in the same field of endeavor for the purpose of using nonlead projectiles in range ammunition, with one of ordinary skill in the art knowing that ammunition means cartridges of shotgun and rifle, the projectile being formed into the appropriate shape for each application, including jacketing as discussed by West et al.

It would have been obvious to one having ordinary skill in the art at the time of the invention to use the components of West et al. with the projectile of WO'878 in order to form nonlead range ammunition.
